RE: Certification of Completion, Hazardous Substance Environmental Remediation
Federal Building in Cape Girardeau

Dear Mr. Hartshorn:

A closure report dated August 30, 2000, for the Federal Building site has been reviewed. This is to certify that no further action is required at the site related to the contamination identified in the environmental site assessments provided to the Voluntary Cleanup Program. This determination is based on information provided in the site assessment provided by CAPE Environmental Management, Inc. For the purposes of this letter, the Federal Building site consists of the area described in the Special Warranty Deed received in this office on March 27, 2000.

The site assessment revealed a heating oil underground storage tank (UST) is dedicated to the heating system for the Federal Building. The heating oil tank is exempt from the regulations of the Underground Storage Tank Section of the Missouri Department of Natural Resources (DNR). The 4,000-gallon UST was closed by removal on May 17-18, 2000. DNR has determined that the remedial actions taken were adequate to remove accessible contamination to levels acceptable for unrestricted use of the property.

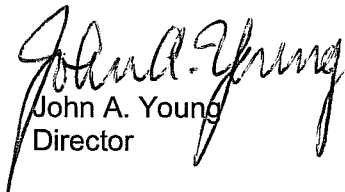

Complete files concerning the investigation and remediation of this site are maintained at the offices of the Missouri Department of Natural Resources, Hazardous Waste Program, in Jefferson City, Missouri.

Should future monitoring or other investigations at or near the subject property find that additional contamination is present that was not identified or addressed during the investigations and remedial actions that are referred to in this letter, DNR can require additional investigation and remedial action in the future.

Thank you for participating in the Voluntary Cleanup Program.

Sincerely,

DIVISION OF ENVIRONMENTAL QUALITY

John A. Young
Director
